

Project Requirements Acknowledgements

I, Muhammad Fermi Pasha, confirm that I have received the Requirement Traceability Matrix (RTM) from MDS02 for the project An Automated Health Information System. This document acts as a thorough collection detailing the functional and non-functional requirements meticulously collected and recorded by MDS02.

After receiving it, I carefully examined the contents of the RTM to fully grasp the scope, goals, and required features of the project. By carefully documenting everything, MDS02 has created a detailed framework that follows the best practices and standards of project management in the industry.

By signing below, I confirm that I have thoroughly examined the RTM and believe its contents are accurate and represent the project's goals. I also verify that the documented requirements sufficiently address the functional aspects of the project, such as user interactions, system behaviors, and data processing capabilities.

Additionally, I understand that my endorsement of the RTM indicates agreement with the overall project goals and the expectations of stakeholders. It highlights my trust in MDS02's hard work and skills in gathering, evaluating, and recording vital project requirements.
