

Accessibility: Have to download the dataset manually and upload to the published site before being able to access the data visualisation

Colour Selection: Can be improved to not include the use of red or green colour like the Choropleth map, Dot distribution map, and the Sankey Diagram. This is to cater to the colour-blind people.

Individual Charts:

- Sankey Diagram may be incomplete so I can't critique must on it
- Choropleth map very pretty but might need to change the use of colour hue
- Dot Distribution map is by the forest I assume in each state in Malaysia. It is pretty but maybe use another colour hue. Bubble size too big without zoom.
- Something is wrong with the stacked area chart so I can't critique must on it
- Bubble charts have one error in the bubbles which is specifically for Terengganu. Add annotations for the bubble chart as it looks a bit empty.

Typography: No title for each graphs and no accompanying text description for the charts

Balance: The charts are more favoured towards the left side of the dashboard
